

DIAPERING PROCEDURES

STEP 1

Prepare for Diapering Before Bringing Child to the Table

- Change the table paper (if used) to cover the table from the child's shoulders to feet (in case it becomes soiled and must be folded over to create a clean surface during the change).
- Obtain enough wipes for the diaper change (including cleaning the child's bottom and the child's and teacher's hands after taking the soiled diaper away from the child's skin).
- Get a clean diaper, plastic bag for soiled clothes and clean clothes (if soiled clothing is anticipated).
- Gather your non-porous gloves (if they will be used), and a dab of diaper cream on a disposable paper towel, if cream is being used.

Supplies should be removed from their containers and placed near, but not directly on, the diapering surface before starting the diaper change.

STEP 2

Avoid Contact with Soiled Items and Always Keep a Hand on the Child

- Wash your hands with liquid soap and warm running water.
- Place the child on diapering table. Remove clothing to access diaper. If soiled, place clothes into a plastic bag.
- Remove soiled diaper and place into a lined, hands-free trash container. (To limit odor, seal in a plastic bag before placing into trash container.)

STEP 3

Clean the Child's Diaper Area

- Use wipes to clean child's bottom from front to back.
- Use a wipe to remove soil from adult's hands.
- Use another wipe to remove soil from child's hands.
- Throw soiled wipes into lined, hands-free trash container.

STEP 4

Put on a Clean Diaper and Wash Child's Hands

- Put on a clean diaper and redress child.

Place the child at the sink and wash hands following the proper hand washing procedure.

STEP 5

Clean and Disinfect the Diapering Area

- Clean any visible soil from the diapering table. Spray the diapering surface with bleach-water solution and wait more than 10 seconds before wiping with a disposable towel or allow to air dry.
- The recommended practice is to wait for 2 minutes to allow the solution to kill germs. However, if there is a delay of more than 10 seconds before the solution is wiped from the surface, this is considered adequate. **The surface cannot be sprayed and immediately wiped.**
- The diapering surface must be disinfected after each diaper change with a bleach-water or other approved disinfecting solution.

STEP 6

Wash Your Hands and Record in the Child's Daily Log

- Adult washes hands using the proper hand washing procedure without contaminating any other surfaces.

Additional precautions

All surfaces must be able to be disinfected (e.g., no quilted pads or safety straps, no containers that are stored on the diapering surface).

Toys that are played with or objects that are touched while children's diapers are changed must be put aside to be disinfected.
