

Multi-Factor Authentication (MFA)

COMING SOON TO GAPREK!

To help protect user accounts and sensitive program information, Multi-Factor Authentication (MFA) will soon be implemented for all GAPREK users.

MFA provides an additional layer of security by requiring users to verify their identity with a second authentication method when signing in. This helps prevent unauthorized access, even if a password is compromised.

BENEFITS OF MFA

Protects your account from unauthorized access

Helps secure sensitive student and program information

Reduces the risk of compromised passwords

Aligns with industry security best practices

Enhances overall system security

ROLL OUT TIMELINE

PILOT PHASE

A small group of providers will pilot the MFA process.

PHASED ROLL OUT

MFA will roll out in small phases. Providers will be contacted about implementing the MFA process during each phase.

FULL IMPLEMENTATION

By the end of **January 2027**, all users will be required to complete MFA before accessing GAPREK.

WHAT TO EXPECT

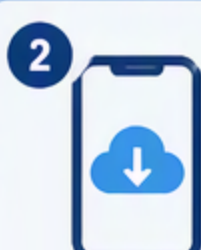

When MFA is implemented, users will:

1

ENROLL

Enroll in MFA by selecting and configuring a verification method.

2

DOWNLOAD

Download the Salesforce MFA application on smart phone devices.

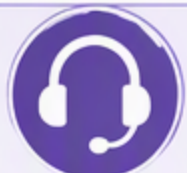

3

VERIFY

Verify your identity during sign-in using the selected authentication method.

Additional details regarding implementation dates, authentication options and enrollment instructions will be provided before implementation.

NEED ASSISTANCE?

Additional resources, training materials, and support information will be provided before MFA enrollment begins.

Stay tuned for additional updates as we prepare to launch MFA and enhance the security of the GAPREK system.
